

NSW Police Force

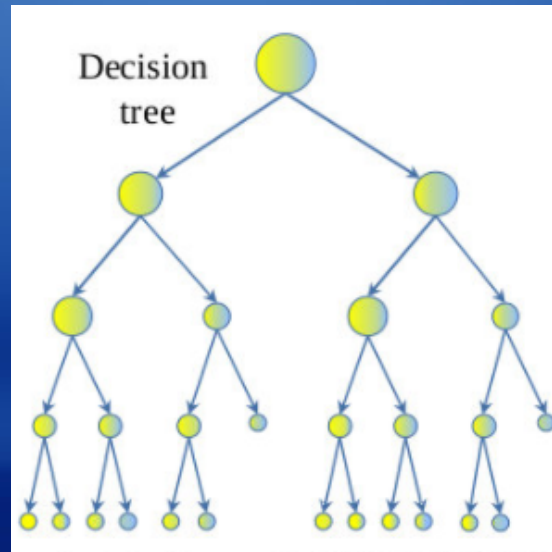

A Machine learning analysis of New South Wales police misconduct

Timothy Cubitt
Senior Research Officer
Professional Standards Command

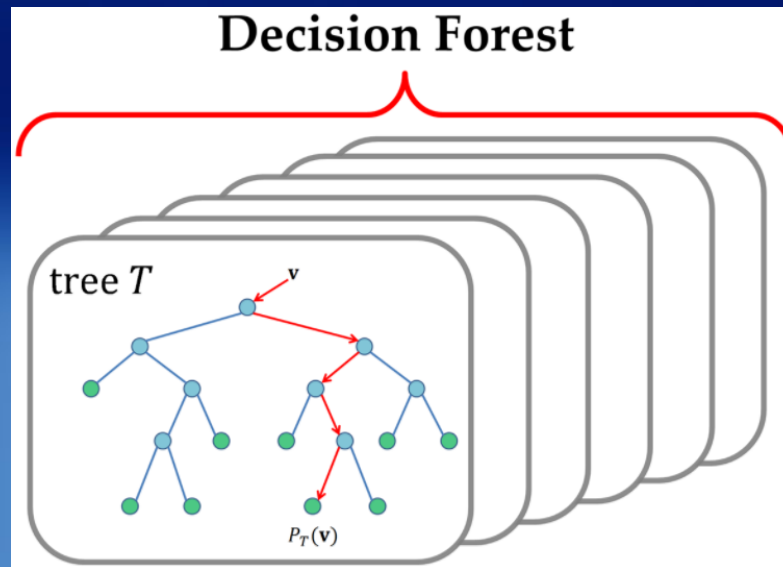

How does this analysis work?

- Decision tree

- Decision forest

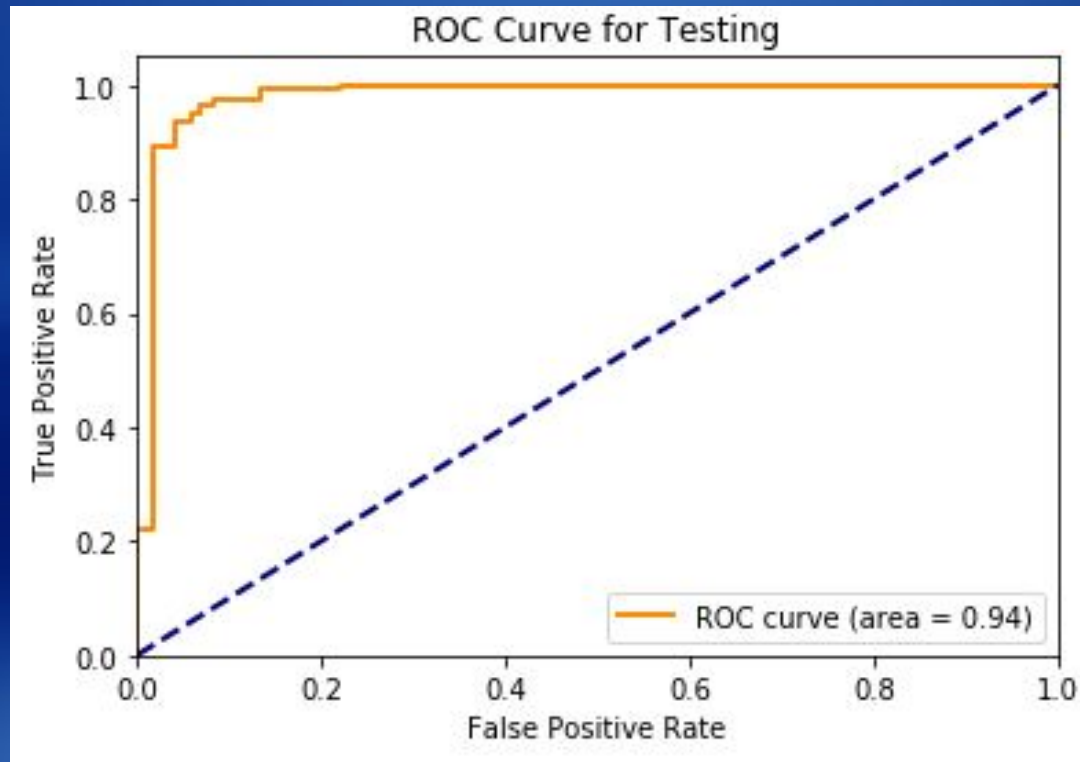

Initial findings

- On analysis it was clear that variables relating to prior consideration for serious misconduct accounted for a substantial proportion of power (0.368) in a particularly robust model (AUC=0.97)
- Due to its strength this result marginally obscured other results, subsequently it was noted and set aside to allow further insight among remaining variables.
